Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Center project name: chr.1
Center clone name: RP11-6B6 (sc0601)
Center clone name: RP11-6B6 (sc0601)
Center clone name: RP11-6B6 (sc0601)
Sequencing vector: plasmid; L08752; 100% of reads
Chemistry: Dye-terminator ET; 57% of reads
Chemistry: Dye-terminator Big Dye; 43% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 156488 bases at least Q40
Consensus quality: 156447 bases at least Q20
Consensus quality: 15658; bases at least Q20
Insert size: 157388; sum-of-contigs
Quality coverage: 7.3x in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     6264: contig of 6264 bp in length
